The field of biomedical control systems is relatively young compared to aerospace, automotive, and the chemical process fields. Nevertheless, some noteworthy recent developments have emerged in two key application areas: cardiovascular systems and endocrinology.

Biological Thermodynamics Internal Energy (U) Is the energy within the system The internal energy of a system is the total kinetic energy due to the motion of molecules (translational, rotational, vibrational) and the total potential energy associated with the vibrational and electric energy of atoms within molecules or crystals.

4 Chapter 1 Biochemical Thermodynamics  $\Delta E$  A negative sign for  $\Delta E$  implies that the system has a lower energy in state B than in state A; informally, B is energetically "downhill" from A.  $\Delta E$  For a cyclic process, taking a closed system from state A to B and back to A,  $\Delta E$  is zero (Figure 1-2).

understand the structure and function of the musculoskeletal system. Biomechanics is the study of biological systems by the application of the laws of physics. The purposes of this part are to review the principles and tools of mechanical analysis and to describe the mechanical behavior of the tissues and structural units that compose the musculoskeletal system.

Nanotoxicology is defined as the study of the nature and mechanism of toxic effects of nanoscale materials/particles on living organisms and other biological systems. It also deals with the quantitative assessment of the severity and frequency of nanotoxic effects in relation to the exposure of the organisms.

Biochemistry is the study of the structure, composition, and chemical reactions of substances in living systems. Biochemistry emerged as a separate discipline when scientists combined biology with organic, inorganic, and physical chemistry and began to study how living things obtain energy from food, the chemical basis of heredity, what fundamental changes occur in disease, and related issues.
